

## Bulk Agricultural/Earthen Materials Chart

Agricultural Material	Total Volume  cubic yards	Total Deliveries  to nursery	Average Deliveries per Week  40 weeks excluding firewood	Maximum Deliveries per Week  40 weeks excluding firewood
NutriMulch	3300	55	1.4	4
Hemlock Mulch	1000	16	0.4	2
Playground Chips	350	6	0.15	1
Loam	1500	25	0.6	4
NutriSoil	1500	25	0.6	4
OrganiGro Compost	2000	33	0.8	4
Stone <small>3/4" stone, dense grade, stone dust</small>	2000	33	0.8	4
Sand	500	10	0.25	1
Firewood	1000 cords	50	0.96	4

The delivery rates assume a 40 week long season (excluding firewood – 52 weeks) for the receipt and delivery of these materials and assume an initial buildup at the start of each season and periodic refills, based on the specific material.

Each of the material bins described in the Building Plan, has a capacity of approximately 160 cubic yards.

Thayer Nursery will fill each at the start of the season and reorder when volumes drop to 40 cubic yards.

There are occasional weeks when there will be as many as four deliveries of a particular product, particularly for Nutrimulch in May and June, which is the busiest period for such material.

Likewise, there will be occasional weeks in September and October when there will be as many as four deliveries of firewood.
